

Create a module

By [D2L Knowledge](#)

Last Updated: **Jun 5, 2025**

You must create a new module before you can add topics. You can also create sub-modules (modules within existing modules) to establish a deeper hierarchy.

Note: If your course is SCORM 2004-compliant, new modules that you create are outside the sequencing and navigation built into the SCORM package.

To create a new module

1. From your course navbar, click **Content**.
2. In the **Table of Contents** panel, click **Add a module**.

The screenshot displays the D2L 'Table of Contents' interface. On the left, a sidebar contains navigation links: Overview, Bookmarks, Course Schedule, Table of Contents (highlighted), and a list of modules: Welcome! (3), Module 1: Poetry (10), Module 2: Non-Fiction (6), Module 3: Presentations (3), and Your Last Day (2). At the bottom of this sidebar, a red rectangular box highlights the 'Add a module...' link. The main content area is titled 'Table of Contents' and includes buttons for 'Import Course', 'Bulk Edit', and 'Related Tools'. Below these, there's a 'Welcome!' section with a video thumbnail of a white coffee cup on a wooden surface with the word 'BEGIN.' on it. Underneath the video, a message reads: 'Welcome to the English Course. To get started, be sure to complete the Orientation Checklist.' Below this message are two buttons: 'Upload / Create' and 'Existing Activities'. Further down, the 'Orientation Checklist' and 'Grade Alert' are listed, each with a checklist icon and a checkmark.

Figure: The **Add a module** field of the Table of Contents page.

3. Enter the name of your new module and then press **Enter**.

A new module is added to your Table of Contents and the module is opened for editing.
